CAT. No. 3L1640 Jan. '17
Printed in Japan
Kawasaki arc welding robots use the latest arc welding technology to rival the quality of a skilled human welder

Features

**Easy operation**
Each robot is equipped standard with an easy to view and operate color LCD touchscreen teach pendant. The operator teaches the process path using dedicated arc welding teaching screens that are designed for simplified use and easy operation.

**Easy connection with the optimum welding equipment**
The built-in interface dedicated to arc welding equipment enables an easy connection using a single cable.

**Welding condition database**
During an automated process, the operator can change the welding conditions on-the-fly, and then store these changes to a built-in database. The saved conditions can then be recalled from the database and reused.

**Reduced downtime**
A standard, dedicated start sequence function improves the arc establishment. Also, for weld process faults, the robot includes a restart sequence function to automatically conduct overlap welding and resume the operation.

**Advanced technology**
Servo-torch, touch sensing, special weaving pattern, real-time path modification (RTPM) sensor, start-point sensing, multilayer welding function, and auto voltage control (AVC) sensor are some of the advanced arc welding options available with the Kawasaki welding robots.

**Capable of TIG welding and Plasma welding/cutting**
High-noise operations have been carefully considered at the R&D stage. TIG welding and Plasma cutting can be done without difficulties.

**Offline programming**
Kawasaki offers arc welding specific offline programming software to automatically generate robot programs from 3D CAD data. Kawasaki’s KCONG software significantly reduces robot teaching time and lowers production costs.

### Motion range (°)

- **Arm rotation (JT1)**: ±165
- **Arm out-in (JT2)**: ±165
- **Arm up-down (JT3)**: ±175
- **Wrist swivel (JT4)**: ±180
- **Wrist bend (JT5)**: ±135
- **Wrist twist (JT6)**: ±180

### Max. speed (°/s)

- **Arm rotation (JT1)**: 240
- **Arm out-in (JT2)**: 240
- **Arm up-down (JT3)**: 240
- **Wrist swivel (JT4)**: 430
- **Wrist bend (JT5)**: 430
- **Wrist twist (JT6)**: 650

### Moment (N·m)

- **Wrist swivel (JT4)**: 0.4
- **Wrist bend (JT5)**: 0.07

### Moment of Inertia (kg·m²)

- **Wrist swivel (JT4)**: 0.07
- **Wrist bend (JT5)**: 0.07

### Mass (kg)

- **Body color**: Munsell 10GY9/1 equivalent
- **Installation**: Floor, Ceiling

#### Environmental condition

- **Ambient temperature (°C)**: 0 - 45
- **Relative humidity (%)**: 35 - 45

#### Power requirements (kVA)

- **Controller**: E01

#### Optional equipment

- Shock sensor
- Torch bracket (350 A/500 A)
- Installation base (600 mm / 300 mm)
- Base plate (750 mm × 750 mm × 25 mm)
- Linear slide
- Positioner
- Servo torch
- RTPM (arc sensor)
- AVC (arc-sensor dedicated to TIG welding)
- 3D laser sensor
- Wall mounting

**KCONG** Kawasaki Common Offline NC data Generator

KCONG, our offline programming software, automatically generates a robot’s welding path based off of workpiece geometry.

**Features**

- **No need for time-consuming robot teaching**
- **KCONG** generates robot welding paths quickly and easily from 3D CAD data such as DXF, IGES, STEP or VRML.

**Offline process verification**

Once KCONG automatically generates the robot welding path, users can then view the simulation of the arc welding process, check for collisions, weld access, and system layout issues, and make fine adjustments to the generated welding path.

**Direct program download**

After verifying the weld process and making any necessary adjustments, the operation program is generated by KCONG. The completed weld operation program can then be downloaded directly to the robot controller.

---

**Servo Torch**

Kawasaki’s servo torch option delivers high quality welding.

**Features**

- **Can be used with small-gauge iron or aluminum wire**
- Feeds small-gauge iron wire (ø 0.6 mm) or aluminum wire steadily with no buckling.

**Excellent arc stability**

The constant-speed wire feed control improves wire feeding performance, resulting in excellent arc stability.

**Improved arc ignition performance**

The servo torch can control complex wire feeding at the start and end of welding operations, thereby improving arc ignition.
**E series**

- **An evolution of engineering excellence**

Kawasaki has incorporated more than 45 years of experience as a robot industry leader into the development of the most technically advanced controller available. The E Controller combines high performance, unprecedented reliability, a host of integrated features and simple operation, all in a compact design.

**Features**

**Compact**
The overall volume of the E Controller has been reduced compared with the previous model. The small footprint of this compact controller allows for installation in “high density” applications. For further space saving options, an upright-position or stacked installation is possible, without impeding performance.

**User-friendly operation**
The easy-to-use teach pendant now incorporates motor power and cycle start at your fingertips. Multiple information screens can be displayed simultaneously. The intuitive teaching interface is simple to use.

**Programming ease & flexibility**
A rich set of programming functions come standard with the E Controller to support a wide range of applications. Functions can be combined and easily configured within a system to suit a particular application. Also, the powerful Kawasaki AS Programming Language provides sophisticated robot motion and sequence controls.

**Advanced technologies**
The enhanced CPU capacity allows for more accurate trajectory control, faster program execution, and quicker loading and saving of files. In addition, memory has been expanded to meet the need for higher program storage capacity. The controller comes equipped with a USB port for external storage devices.

**Easy maintenance**
Modular components with limited cables translate into easy diagnostics and maintenance. A host of maintenance functions are available, including self-diagnostics on hardware and application errors to minimize troubleshooting and reduce MTTR (Mean Time To Repair). Remote diagnostics via the web server function enables service support from anywhere in the world.

**Expandable**
Three external axes can be added to the E01 controller for a total of nine controlled axes, while two can be added to the E7X for a total of eight controlled axes. Numerous communication fieldbuses are available for controlling peripheral devices. The Kawasaki K-Logic sequencer software can be combined with user customized interface panels on the teach pendant.

- **Dimensions (mm):**
  - E01: W500×D420×H259
  - E7X: W580×D580×H278

- **Transformer unit:**
  - W580×D580×H178 (E01 only)

- **Memory capacity (MB):** 8
- **Cable length (Robot-controller):** 5
- **Mass (kg):** E01: 40, E7X: 50
- **Power requirements:**
  - AC200-240V ±10%, 50/60Hz
  - AC240-480V ±10% 50/60Hz

- **Ambient temperature (°C):**
  - 0 - 40 (0 - 40 for E7X in vertical use)

- **Relative humidity (%):**
  - 35 - 85 (no dew, nor frost allowed)

- **Teach pendant:**
  - TFT color LCD display with touch-panel, E-Stop switch, teach/repeat switch, control power light, cycle start switch, motor-on switch, hold/run switch, error light, error reset switch.

**System configuration diagram**
